

Fire and Emergency Lighting Systems

Fire Detection

Fire is responsible for millions of pounds worth of losses and damage in the UK every year and whilst fire prevention is always the main priority, fire detection systems provide the earliest possible warning that an emergency situation is developing.

Goldshield designs and installs complete fire systems together with remote monitoring and fire brigade signalling.

In an emergency, every second counts – not only in the interests of ensuring a quick and safe evacuation of the premises, but in making the difference between building recovery or write off.

Goldshield designs and installs complete fire systems with features such as heat and smoke detection, smoke beams, audio and visual warnings, air sampling and wire-free systems, automatic door and ventilation operations, flame detectors, intrinsically safe systems, together with remote monitoring and fire brigade signalling systems.

Ranging from traditional, standalone detectors and conventional fire detection systems to fully analogue addressable systems with networking capability which enables integration with existing security systems – to combine and simplify monitoring and detection processes – all our products are open protocol.

Open protocol products are fully accessible and provide customers with freedom of ownership and, therefore, the ability to choose any service provider for the ongoing maintenance of the system.

The Fire Regulatory Reform Act 2005 places the duty of care on the management of the building to ensure the building occupants are safeguarded in the event of a fire. The risk assessment carried out by a professional

company will outline the requirements within the building, for safety in the construction of electronic alarm systems, to safeguard the escape routes and building occupants.

Benefits include:

- Building occupant safety
- Protection of occupant, fixtures and fittings
- Building protection
- Early response of the fire authorities in an emergency
- Staff awareness of protection in the building
- Compliance with the Fire Regulatory Reform Act 2005 and BS 5839 Pt1 2005
- Compliance with the Health and Safety Act

Goldshield delivers fire detection solutions that best meet your needs and is committed to providing customers with a cost effective, highly efficient system together with first class customer service.
